Description of the Related Art In recent years, a liquid crystal display apparatus is frequently used as a display unit of a personal computer and an image display unit of a car navigation system, a TV camera and a VTR, etc. For example, in a car navigation system or the like, information such as an address of a destination is input to the car navigation system as needed and a map picture corresponding to the input address is displayed on a liquid crystal display panel. Meanwhile, in recent

years, a demand to make the liquid crystal display apparatus slim by forming the liquid crystal display panel as a so-called "tookigawa-type" to be built in an information equipment such as a car navigation system, etc. is increasing from the viewpoints of design and space-saving. As the liquid crystal display panel is made slim, reduction in thickness of the liquid crystal display panel, and, in order to make the thickness thereof as thin as possible, is required. In addition, it is required to provide a liquid crystal display panel with high visibility by enhancing an aperture ratio, in particular, and therefore, a liquid crystal display panel with high brightness is required. Conventionally, as one method for enhancing the brightness of the liquid crystal display panel, a so-called �

Description: Peakshift Control Technology gives users the ability to save power and extend battery life by automatically shifting power from an AC power supply to your notebook's internal battery, depending on the ambient temperature. This means that the most energy-efficient voltage is applied to the notebook when the ambient temperature drops. To compensate for this, peakshift technology switches the notebook's power supply to the internal battery when the ambient temperature rises - which is when it's most

capable of producing electricity. This feature is perfect for trips and vacations, when you're trying to stay on the road and on battery power. How to run the Toshiba PeakShift Control Click Start, Search, and the Toshiba PeakShift Control will appear in Windows. Select the APM mode, save into a file, set the timing, or select for a particular notebook model, enter the password. Click the Save button. Toshiba PeakShift Control will save the files to the specified location. Note: Toshiba PeakShift Control has no local user interface. The most important components of your notebook's battery The battery (or battery pack) is the source of electricity for your notebook. When you use your notebook, you want to make sure that this source of electricity is fully usable. To do this, you need to carefully monitor your notebook's battery. Unfortunately, the battery pack only displays the battery capacity in terms of power capacity - which you can hardly figure out if you are an average user. That's why you need to be careful and watch out for any changes to the battery's power capacity over time. Monitoring your notebook's battery
