1. Field of the Invention
This invention relates to microwave ovens and more particularly to a microwave oven provided with a system for remotely controlling the cooking times of various foods in the oven.

2. Description of the Prior Art
Generally, a microwave oven includes a magnetron for generating microwave energy which is then reflected into an oven cavity within which various foods to be cooked are placed. In a microwave oven which automatically controls cooking times of foods in the oven, the times are stored in a memory device and a timer is provided for initiating cooking cycles. Generally, however, a time for cooking of a food is based on an average cooking time of that food and a cooking time required for that food varies substantially depending on the shape and size of the food to be cooked. Accordingly, a conventional microwave oven cannot accurately cook a particular food by setting a cooking time thereof based on a given average time. Thus, a desired cooking result can not be obtained. Therefore, it is an object of the present invention to provide an improved microwave oven which can obviate and mitigate the above-mentioned drawbacks.

Indian officials were not surprised that Kumra might be telling the truth. They had known that he was lying when he claimed to be the pilot in the initial messages. The reason they had a manhunt was because they could not be sure that Kumra was telling the truth; he was a Muslim
