For example: Generating a key for a specific site: Use the keygen with the command: autocad -site:MySite The key gen command should output a key to an Autocad save-file. A: Here is my solution which I hope will help to people who do not have access to the internet: Create an xml file which will contain all your details about you system (e.g. username, hostname, userid, site and password). So for example my xml file is: MyPC site site username mypw mypc.xml This is a very simple file, but it will be enough to share with the Autocad server (i.e. Autocad instance you wish to use). To connect, you have to set the value of Hostname to your IP address, Site to the site you wish to use, UserID to the account name you created when first installing Autocad on that computer. For example, username, hostname, mypc.xml You can set the other fields to anything (e.g. password, keyfile) that you may need. If you are using an Autocad with multiple computers (or whatever) you can use a network share or in my case just a folder in the C drive on the computer running autocad. I use autocad on my pc, so I first save a copy of the file in my autocad save location (typically in C:\Program Files (x86)\Autodesk\Autocad 2020\User Files\
