Windows 7 Navigation Application Quick Start Video: Windows 7 Navigation Application Features: Allows you to use the Location Platform to obtain a user's location as well as track his or hers movement with Virtual Earth. The package contains all the binaries and code required to access Windows 7 Location Platform data using .NET software. Once it is implemented, it enables you to view data with Virtual Earth in 3D and keeps track of any movement when subscribed to the Local Platform API. The client for Windows 7 Navigation Application also offers you the means to use a comprehensive interface which is fitted with the WPF Ribbon and VE3D WinForms control. Once it is up and running you'll be able to track movement using GPS. Using Windows 7 Navigation Application you are able to browse the map with just your mouse and you can run the app in both window and fullscreen modes. Windows 7 Navigation Application Features: 1. Windows 7 Navigation Application Features 1.1 Easy to Use Windows 7 Navigation Application is easy to use. Once it is installed you can make the app work in a snap. The package contains all the required components and makes the user interface fast and efficient. 1.2 Ability to Customize Windows 7 Navigation Application makes it easy to customise its appearance to match your own software. Not only does the user interface look great but the local development kit makes the entire process simple. 1.3 Hardware Compatible Windows 7 Navigation Application is hardware compatible with the Windows OS and is capable of detecting devices such as GPS as well as access the Internet. All of this is done through a hardware compliant driver which is provided as part of the package. 1.4 Mobility Windows 7 Navigation Application makes it easy to track a user's location using the Location Platform. It can also track movement over time. You can use a variety of features including geofencing, Virtual Earth as well as the Local Platform API. 1.5 Security Windows 7 Navigation Application is completely safe and secure. It makes it easy for users to obtain a user's location. All the necessary components are provided for the user to track movement and obtain a user's location as well as 3D map of the world. The user will also be able to subscribe to the Local Platform API

Compatibility What's new in this version: - (New) : WinForms is now able to subscribe to the Windows 7 Platform's Local Platform. - (New) : Ribbon is now able to display the new Windows 7 Navigation Application's main window. - (New) : You can now set the full screen mode (WinForms only). - (New) : The user can now choose to run the application in a window or full screen mode. - (New) : You can now use a WPF Ribbon to have a GUI. - (New) : Virtual Earth (VE3D) is now able to display the new Windows 7 Navigation Application's main window. - (New) : You can now use a WPF Ribbon to have a GUI. - (New) : The VE3D WinForms control is now able to subscribe to the Windows 7 Platform's Local Platform. - (New) : You can now set the full screen mode (WinForms only). - (New) : The application is now able to use the Windows 7 Location API. - (New) : The application is now able to use the IP versions of the Windows 7 Location API. - (New) : The application is now able to use the HTTP version of the Windows 7 Location API. - (New) : The application is now able to use the RAW version of the Windows 7 Location API. - (New) : Virtual Earth's control is now able to subscribe to the Windows 7 Platform's Local Platform. - (New) : Virtual Earth's control is now able to display the new Windows 7 Navigation Application's main window. - (New) : You can now set the full screen mode (WinForms only). - (New) : You can now use a WPF Ribbon to have a GUI. - (New) : You can now use a VE3D control to have a GUI. Time line June 4, 2009 : Version 1.0 is released. - June 8, 2009 : First feedback from users. - June 9, 2009 : First feedback from users. - June 10, 2009 : First feedback from users. - June 11, 2009 : First feedback from users. - June 12, 2009 :

What's New in the?

Windows 7 Navigation Application is a Visual Studio package that allows you to use the Location Platform to obtain a user's location as well as track his or hers movement with Virtual Earth. The package contains all the binaries and code required to access Windows 7 Location Platform data using .NET software. Once it is implemented, it enables you to view data with Virtual Earth in 3D and keeps track of any movement when subscribed to the Local Platform API. The client for Windows 7 Navigation Application also offers you the means to use a comprehensive interface which is fitted with the WPF Ribbon and VE3D WinForms control. Once it is up and running you'll be able to track movement using GPS. With a simple click you can have it pinpoint your location and places a marker on the map. As it tracks your movement it adds more pins at various locations and you can remove them with yet another click. Using Windows 7 Navigation Application you able able to browse the map with just your mouse and you can run the app in both window and fullscreen modes. The product is distributed as a package that includes a Microsoft Windows installation and the needed binaries for development. The distribution includes an installation wizard that helps you to quickly set up the application. During the setup you will be prompted to download and install the necessary components. During the installation you will also be able to choose the Location Platform and the associated API (includes the GPS API). You'll also be prompted to select the location data source you want to use. Features: - Obtain the user's location and track it with Virtual Earth; - Keep track of movement by subscribing to the Local Platform API; - See places on the map with Google 3D terrain; - Use a rich interface fitted with a WPF Ribbon and a VE3D WinForms control; - You'll be able to browse the map with just your mouse and in both window and fullscreen modes; - Keep track of your location using GPS. Requirements: - Microsoft Visual Studio 2008; - Microsoft .NET Framework 3.5; - Microsoft Windows 7. Please see the overview document for the list of required and recommended components. Licensing Information Windows 7 Navigation Application is distributed as a package that includes a Microsoft Windows installation and the needed binaries for development. The package includes an installation wizard that helps you to quickly set up the application. During the setup you will be prompted to download and install the necessary components. During the installation you will also be able to choose the Location Platform and the associated API (includes the GPS API). You'll also be prompted to select the location data source you want to use. Please read carefully the overview document to see

System Requirements:

Mac OS X 10.7 or later Adobe AIR 3.5 or later 2GB RAM minimum (4GB recommended) Recommended system specs: Recommendations: A GPU with at least 1GB RAM is recommended. To
