The author has also written one part of the Deadly Diamonds Series and the second part of this series will be available on 29th September 2017. I think Driving Maniac has got some good lines, but I wish this would have been longer. I mean the author made quite a few twists in the novel but they came very abruptly and that's why it made the reading feel strange. This book is all about Arian, the friend of the heroine, who is a lazy, wicked, promiscuous and womanizer. She is a piece of work and I wouldn't want her to be my friend if she had to see the lady in person. She is very bad news and Tehani Wessely has tried really hard to give her a makeover, but unfortunately she never gets a prize for that. The heroine of the novel, Madeline, gets to know Arian through a bit of flirting. She agrees to help him with his brother's marriage. However, things turn out to be more and more complicated as Arian gets involved with someone else and it becomes a battle between the two women. In my opinion, the story is just too fast paced. It doesn't give you a chance to get into the romance of the story and that is where the novel loses its sparkle. The heroine, Madeline is selfish and thinks that Arian's intentions are nothing but mere childish fun. The other character, Janice, is a twenty something, who believes that their sex drive is supposed to be God given. She becomes the main reason for all the trouble that occurs because of the two women. I am not a girl and I don't understand all this and at times I almost felt like giving up on the book. It's not that the plot is bad, but the book is just too short. The end result a1d647c40b

Q: How to get PySpark to recognize a file directory I'm trying to start an R/Spark job, and I need to pass in a file directory from a Hadoop job. I'm fairly new to R/PySpark, but am not new to Hadoop and Spark. However, I can't find a way to specify the file directory to the Hadoop job. I want to pass this information to the Hadoop job, so that I can do something like this: sc.textFile("directory/file1.txt") But, I don't want to have to pass in all of the file names as a list in a string (pandas dataframe?). Is there any way that I can specify a file directory in PySpark, or do I have to use some other method? A: You can specify that Hadoop job can read/write data from your filesystem using conf.set('fs.hado

I'm trying to understand how WKWebView works under the hood. I'm trying to load a sample file to WKWebView. The sample contains a small number of HTML page fragments, and some images in a background folder. In Safari, when I navigate to the file, the fragment gets parsed correctly, and I see a layout like the following: Hello world! In WKWebView, if I navigate to the file, I get a layout like this: Even though I load the same file, I'm not seeing any of the HTML or CSS. I'm assuming that there's some caching going on. Is there any way to turn it off? I tried searching online, but I couldn't find anything. I'd like to understand how WKWebView works and what's going on in terms of caching. A: As of iOS 10, the Chrome Developer Tools (which WKWebView implements for debugging) can load the assets asynchronously. The page will not fully render until the images load. I ended up finding a better approach, which is to add a placeholder image to the HTML, as can be seen in the following screenshot. When the image in the background load, it replaces the placeholder. The present invention relates to a device and method for forming a straight line on a substrate.
