R, CD-RW, DVD-R, and DVD+R. A printer has been conventionally known, which includes a spindle motor for rotating a recording medium to be fed on a feed path, an optical head for irradiating a laser beam onto the recording medium and for detecting light of a reflected laser beam from the recording medium, and a carriage moving along the feed path with the optical head. The carriage includes a head holder for holding the optical head, a guiding rod having one end to which the optical head is secured

and a carriage roller coupled with the guiding rod and a bearing for supporting a shaft portion of the guiding rod on the carriage. One end of the shaft portion of the guiding rod is attached to the carriage roller with a bearing, and the other end is exposed from an end of the carriage. When the carriage roller is moved together with the guiding rod, the bearing presses the one end of the shaft portion of the guiding rod against the carriage roller and rotates the carriage roller about the shaft

portion of the guiding rod. Thus, the head holder is moved along the feed path in the radial direction of the shaft portion of the guiding rod. In the printer, the carriage is moved in the carriage return direction following the printing operation. When the carriage is returned to a return start position, the optical head moves into a tracking position on the recording medium fed along the feed path. A laser beam is applied to the 3da54e8ca3
