The BIN is the Intel.INT format. The HEX file is the Intel.HEX format. Each file saved with the BIN format will produce a BIN file when loaded into another BIN file (you can not load a BIN into a HEX file. If you load a BIN file into a HEX file an error message appears). The HEX file format loads into a HEX file. The BIN format cannot be edited by any utility. Intel Hex File Compare Review: BIN: A binary format, the contents of the file are encoded in the file name (BIN file), so the names of the files are self-descriptive and very easy to understand. HEX: An extended ASCII text format, the contents of the file are encoded in the file contents (HEX file), so the names of the files are self-descriptive and very easy to understand. BIN and HEX are for text files and cannot be used for binary files. Unlike HEX files, BIN files cannot be edited by any utilities. Intel Hex File Compare Support File Types:
