

The goal of this article is to help you to easily create websites with a single click. It seems that many people are confused about WordPress. It is one of the most famous content management systems (CMS) in the world, used by over 25 million people. WordPress allows you to develop websites without the need to know any programming language. Although this guide will teach you basic WordPress working knowledge, it is not a complete guide. You may find much more info on the web or from a book. You start by creating a WordPress account and then follow the instructions that are necessary in order to create a website with your own unique content. In this guide, we will use the most common features of WordPress such as the administration panel. We will create a website and test its appearance with the help of a demo. Before you start: A WordPress account is necessary to create a personal blog, a social network or a website for the company. Creating a website requires an account. If you already have a personal website, you can link it to your WordPress account. To do this, visit your WordPress Dashboard and click on the "Create a New Blog" button. After you have created your account, you can access to your WordPress Dashboard via www.yourname.com/wp-admin. The second step is to follow this tutorial, which is all about how to create a blog on WordPress. Step 1 Visit www.youravon.com and sign up for a free account. After that, click on the "Create" button. Step 2 Choose the "Choose a topic" option. You will be then taken to the Create an account page where you will have the option to select the kind of blog you want to create. It is important to select the right one, since the topic can be used in a wide range of ways. For example, a blog called "Personal Website" is ideal for people who want to create a personal website. Step 3 A set of options appear. Fill in the data to give your blog a better appearance. Then, click the "Create My Blog" button. You will be taken to the Dashboard where you can check your blog. It's now ready. Step 4 Log into your WordPress Dashboard at www.yourname.com/wp-admin and click on the Dashboard icon at the top right. Step 5 Before

AJ Image Viewer is a tiny and portable application that puts at your disposal a user-friendly environment for viewing graphic files with the GIF, BMP, JPEG and GIF extension, as well as for converting them to BMP or JPEG format. Plain and simple interface It's wrapped in a straightforward interface made from a normal window with an unpolished design and tidy layout, where you can use a built-in folder explorer to navigate disk directories and view all supported image files from a specified folder. This tree view is a bit rudimentary, though, making it a bit inconvenient to explore the computer. The drive can be changed from a drop-down menu. View and convert images In the following step, all you have to do is select a file from the list after viewing the names and extensions of all items, in order to view the photo in the main window. The status bar reveals the full path and size of the currently selected item. When it comes to the viewing mode, you can stretch the image or place it in the center of the screen. In order to save files with the JPG or BMP format, it's only necessary to point out to the destination folder and enter a preferred name. Portability advantages The entire program's packed in a single.exe file that you can drop in a custom location on the disk or keep it stored on a USB flash drive to directly run AJ Image Viewer on any machine without installers. It doesn't modify Windows registry settings, need DLLs or other components to work properly, nor does it create files on the disk without asking for permission. AJ Image Viewer 1.0.3.0 1.0.3.1 5.33 MB Portable IDS's powerful software suite of tools offers more than just intrusion prevention, anomaly detection, and network security monitoring. It is well organized, easy to use, and loaded with all of the features you need to take control of your network security. SERVER REVIEW It is a flexible built-in server that allows you to monitor the whole network. It shows you all the IP addresses and their domains. It can display all the websites from any point of the entire network. SERVER SOFTWARE With our Web Security Server Software you can easily set up a private server and monitor all the traffic in real time. You will receive an e-mail notification every time your site is affected by a hacker attempt or DDos (Distributed Denial of 6a5afdab4c
