I run the sample apps from the SDK, but there is no emulator. Can I get the Mango SDK Emulator to work in VS 2012? A: No, unfortunately the emulator is not yet released and I think the current state is that you can use it in the Visual Studio Emulator for Windows Simulator but not in the Windows Phone emulator. Also, you need to have a Windows 8 developer license to run it. I have 3 accounts on this forum. 3 different computers and 3 different internet connections. I read the rules and I AM AN ADMIN. But you haven't been anyone to come here since D-day. Does that mean I shouldn't post, or that you're not interested? So I emailed you back. Maybe you can't put up with us any longer. Fair enough. I don't have time to argue with you. Just to reiterate, we didn't say you can't post, but when you do, I'll just sit and wait.
