CropTron is designed for the detailed analysis of field crop experiments. Its features allow to perform measurements on single traits or multiple ones, and to measure within plants, individually for each plant or for all of them. The experiment can be organised in multiple parallel or series. All the statistical tests, plots and tables are adjustable to a high degree, and all the information can be saved in standard ASCII, dBase or Paradox files. When it comes to measuring, the graphical display of plant traits (i.e. height, area, circumference or volume), is very easy to set up. The measurements of all plants can be combined in one, or repeated for every plant separately. The choice is all yours and you can adjust the process to both your needs and crop. The screen layout can be easily modified, in order to present all the data on the screen, in the way that best suits your needs. The precision of CropTron is extremely high, due to the ease of control it offers. All the adjustments are made with a couple of clicks, and with them you can select one plant at a time, or for all of them. The selected data is graphically presented on the screen, in a variety of ways (area, volume, circumference, height, average length or diameter, etc.). For each plant, you can adjust all the variables, including the graphical display (area, height, circumference or volume, etc.). The number of measurements can also be increased or decreased. Among the most remarkable features of CropTron are its functions for statistical analysis. The user can perform the GLM, ANOVA, ANCOVA, Linear and Non-linear Regression, as well as apply the polynomial function, or compare one to one. The data collected by CropTron can be exported in various formats for further processing with other software. CropTron is a highly flexible software that is quite easy to use. Its user-friendly interface allows you to
