For example, a packet arrives from 192.168.1.10 to 192.168.1.20. I am trying to capture the numbers for the source and destination. For example I am trying to capture this: 192.168.1.10 -> 192.168.1.20 But what I am getting back from my code is: 192.168.1.10 Any ideas on how I can capture the real to and from address? A: The server sends a UDP packet with an IP and UDP header. The IP header contains the source and destination IP addresses. The source address is the IP address of the UDP packet creator. The destination address is the IP address of the UDP packet recipient. The port is the protocol number being used. Q: Stubbing a class in C#? I need to create a "fake" instance of a class for unit tests. I have googled and found a solution, but I don't really understand why it works. What's New In AutoCAD?

Use any file type on the market, such as PDF, PowerPoint, and more, to send feedback for editing. Using the same graphic-review capabilities, you can gather feedback on a single graphic while you're working on other aspects of the drawing. You can also do both simultaneously. Add feedback to a live drawing or to a recent file that you've made. Use the standard preview dialog in AutoCAD to check for errors or changes. Speed improvements: Get 3X faster, results are in fewer keystrokes, and the drawing process is more efficient. When creating a new drawing or drawing component, get faster feedback. The feedback prompts appear instantaneously, with changes that are accepted available for more rapid responses. The AutoCAD toolbar functions for multiple commands in a single move. Design using a flexible interface. Two user interfaces (UI) are available. Display settings, such as the paper orientation and the active window, are stored locally and automatically, so you don't have to worry about settings running out of date when you are offline. Increase your productivity and design flexibility with a new simplified Ribbon. Customizable keyboard shortcuts: It's easy to customize keystrokes. After the initial setup, you can make any other changes you wish. Save your customization and make it available across other drawings on your computer. Apply the customization to all your drawings. Keyboard shortcut, navigation, and other customizable features can now be configured in the Options dialog. Tools: Automatically set reference dimensions and predefined distances. The Drawing Environment pane is new, allowing you to view the drawing environment and the ribbon for drawing commands. In the Drawing Environment pane, you can view the various components of the drawing environment and the ribbon for drawing commands. Access several sets of keys from the various drawing tabs, or use the keyboard to switch quickly between drawing tabs. Use the Undo/Redo options and other features of the Undo dialog. Printing enhancements: You can print from a desktop application, as well as on a CD, network, or USB drive. When printing to a USB or network drive, you can navigate without losing any of your current tool state. Include the computer's system date
