Mechanisms by which the depletion of dopamine (DA) in the nucleus accumbens (Acb) following closed-head injury (CHI) is ameliorated by DA receptor agonists are not fully understood. We have evaluated the state of regulation of D-2 DA receptors in the Acb in Wistar rats with CHI induced 3 weeks earlier. In vitro autoradiographic studies revealed increases in the binding of 3H-spiroperidol (Sper) to D-2 DA receptors in the medial shell of the Acb contralateral to the site of injury (+24.7%) and in the dorsolateral region of the ventral striatum (+43.9%). This increase in the dorsal-lateral region was eliminated after 3 weeks of
