## What's New in the Sepham FileXplorer Libra Version?

Sepham FileXplorer was born in an effort to make Windows Explorer (or any other standard program) more friendly and user-friendly when it comes to the management and preview of files. I'm currently using the last version, and I still have the following features that I like: Windows 7, Vista and XP compatible, Ability to save, delete, and change the filtype of a file, The ability to view the file when you already have it saved on a USB drive, "Copy file path" and "Copy File Name" commands in the context menu, Settings to work with different types of files, Change font for the description, Implementation of Windows Explorer search, Ability to make previews of files that are saved in the Internet or in a LAN, Preview of files which are not available in the network, Preview of files based on the real content of the files (not only the extension), View the file in a preview window, "NoImage" mode to view videos, images, and sound files. Ability to save, delete and change the filtype of a file in the same window (the file previewing and the filtype changing windows), Ability to open and preview the files saved in ZIP archives, Ability to view a lot of compressed formats, Different skins available, Ability to make previews of almost any file, A simple, intuitive and friendly interface, ... and many other features.
