Category:Social problems in the workplaceQ: JavaScript and AJAX - localStorage

I'm currently learning jQuery by using it with my PHP code. I found some JavaScript libraries which makes it easy to handle AJAX requests and serialize data: JQuery - jStorage - However, I feel there is something wrong with it, as I found it as a solution to the HTTP Authentication problem. Thus, it's not well-tested and documented. I could use a compatible library but i'm wondering if

anyone has their own library and could share with me the code to use it with localStorage. I have tried working with John Papa's AJAX + Session Management but i couldn't fully understand it as it wasn't well-documented. Thank you for your

help! A: What about this?
