Download: Moiseyev and Gromov [@Gromov-Weinstein2] proved that ${\operatorname{scal}}\geq 0$ for certain conformal metrics. This result has also been extended to the noncompact case [@Viaclovsky-Weinstein]. In the context of CR geometry, this statement has been used to show that certain naturally occurring CR manifolds, such as certain hypersurfaces in $\mathbb{C}^{n+1}$, admit compatible conformal metrics. It was further used to show that $\sigma \geq 0$ in certain geometrically defined singular CR-manifolds [@Derdzinski-Gover-Greene-Stolz]. Suppose now that M is a manifold with C^∞ boundary and $f:M \to \mathbb{R}$ is a C^1 function. Then one can consider the associated weighted function f_α defined by $$f_\alpha(p) = f(p) \int_{p \in \partial M} e^{\alpha \tau_p}, \quad \alpha > 0,$$ where τ_p is the inward unit normal to M at p. As before, it is not difficult to see that f_α is a conformal weight for α large enough. It is not hard to see that the corresponding ${\mathcal C}^\infty$ metric $g_\alpha = e^{2f_\alpha} |dz^1 |^2 + \cdots + e^{2f_\alpha} |dz^n|^2$ also satisfies ${\operatorname{scal}}_\alpha = e^{2f_\alpha} \Delta_{\mathcal M} f_\alpha$. We conclude with the observation that if M is asymptotically hyperbolic, then ${\operatorname{scal}}$ is also a conformal weight as above. Indeed, M is conformally compact, with conformal boundary the conformally compact
