Turbo Plot is a free plotting engine that allows you to create plots in a lot of ways. It is able to plot rectangular and polar areas and you can also draw curves and surfaces. Graphics and effects are modeled on a frame by frame basis. A frame can either start a function or transition between two functions or between a function and another frame. A frame can be toggled on/off and locked or unlocked. A transition to a new frame can also be done by clicking on the desired next frame, or by clicking on an outside frame. You can define the frame rate and the frame duration and the steps between two frames. You can specify the bit depth of the frame drawing (by default, the frame is 32-bit). You can also specify the bit depth of the alpha channel. Moreover, you can specify the number of frames and the frame delays between transitions and between functions. Your plot can draw objects and you can also draw textures. You can specify the type of texture and you can draw vertices on the surface and text on the frame. Finally, you can export your figure as an image, SWF, XBAT file or a set of scripts that the author can use in order to create a new figure. Wet Paint is an advanced program that allows you to create different kinds of paintings in the easiest way possible. This painting tool allows you to add color to your image with certain pre-defined tools. The color mixing algorithm is very clever and the controls (wheel, stipple and paint brush) are operated in the most intuitive way. The program does not use a mathematically rigid color model, but is based on the RGB model. This means that the colors do not remain in the space of pure colors, but they take place somewhere in the linear perspective. The program features a beautiful user interface and is really easy to use. Wet Paint Features You can create many paintings and they will all open and save in their own file format, very comfortable for further use. You can add various layers to your paintings. You can add an optional background image to your painting. You can also add any text to your paintings. The interface has been designed in order to be the best way to work. You can easily navigate around the interface using the mouse wheel. The controls are directly below the image You can zoom the image using the mouse wheel.
