

6.3 â– » Shoryuken Shoryuken (literally translates as "stomach slash") is a Japanese martial art, developed in the Edo period, which is known in English as "Ude" (腕?). Shoryuken is characterized by; complete penetration, press hits, thrust/strike and hip movements to attack the opponent, footwork, self-defense techniques, throwing moves (aimed at vital areas of the body), joint locks, joint manipulation, and a wide variety of other striking techniques. The first known martial art with "complete penetration" is designated as "Aikido", which means "the way of harmonizing" in Japanese. Shoryuken is a modification of Aikido. I have no data of any other martial art that has the same characteristics as Aikido. Shoryuken is the most widely known, because it was designed to have the "complete penetration" characteristics as the first step of Aikido to attack the opponent's vital areas, and to strike or thrust into the target area with a strong leverage. The term "Shoryuken" means complete penetration, and this characteristic is the same in all kinds of Shoryuken. However, there are distinctions in the function of each movement, and the way of executing them. Moving Target: In Shoryuken, the attacking movement is often executed on a mobile object such as the standing or walking opponent. Therefore, its function is to stop, strike, seize and throw the opponent by the end of the movement. In such case, the opponent might be able to evade the attack, because he can move away from you. Preferred body (greater leverage): In general, when the attacker intends to strike with maximum force or to damage the opponent with maximum force, he should always prefer the ground over the opponent's body. The attacker can apply more force and damage by striking from a distance. Force: When the attacker tries to hit his opponent with a strong force, he should always apply his body weight to the opponent, in order to make the movement continuous. Balance: Generally speaking, the body of the opponent is more weak than the attacker, and the attacker is therefore advised to manipulate the opponent's body so that he falls. If you balance the opponent correctly, he will not be able to evade the attack. Currently a staff member at the Pokémon Company, she has been involved in many Pokémon related projects,
