Q: Using a custom Soundboard for a game in Flash So I wanted to create my own soundboard similar to those seen in Flash games such as MMOs. Aka a Flash Version of the Windows 7 Sounds. What I would like to do is define a set of AudioSpeakers (I'm aware that these are not actually speakers). These AudioSpeakers would be played when a sound is triggered. I have all the code needed to do this - I just need to figure out what the best way to go about doing this is. Option 1: Create a MovieClip for each sound slot and have AS3 play them as their respective AudioSpeakers. Option 2: Create a movie clip for each sound slot and create a class for each SoundSlot object. For e.g. SoundSlot1 class SoundSlot1: SoundSlot // Stuff here end class And then have my MainClass play these SoundSlot1 objects. Option 3: Perhaps there is some simpler way that I'm not aware of. A: I've gone with option 3, it's the cleanest solution. 1. Field of the Invention The present invention relates to an electrode plate for an electric double layer capacitor, and more particularly to an electrode plate for an electric double layer capacitor comprising a valve action metal in the outermost layer of a foil. 2. Description of the Related Art An electric double layer capacitor is usually prepared by stacking an active material (e.g. activated carbon) on a current collector and fabricating a unit capacitor element by winding and rolling the element, and subsequently putting the unit capacitor elements in a case. The entire capacitor is completed by pasting a sealing material and the entire element is finally impregnated with a diluting agent. There are also cases in which, in place of the current collector, a foaming electrode mixture comprising active material and active carbon particles is used as an electrode plate, and the element is compression-molded (JP-B-47-51010), or in which a copper layer having a thickness of 10 to 25.μm is formed on a surface of an active material layer using a conductive adhesive and a separator is pasted on the copper layer. As an active material for such electric double layer capacitors, conventionally a valve action metal, such as activated carbon or manganese dioxide, has been used. In the use of a valve action

**System Requirements:**

Minimum: Recommended: Mac OSX 10.8 and above Mac OSX 10.6 and above is recommended, but works just fine with 10.7. If you want to play with the app on older machines or multiple Macs, just use the latest installer from the support page. Windows XP, Vista, or Windows 7 Windows 7 and Windows 8 are both supported on Steam. However, there are some minor compatibility issues with Windows 8, so we highly recommend Windows 7 or XP.
