Q: What is the different between the map and for each approach? If I want to solve a related set of problems, can I use either of the following approaches? for (Item i : items) if(item.getItemType().equals("M")) { weight += i.getWeight(); } else { weight += i.getWeight() * 4.80; } } Map itemWeight = new HashMap(); for (Item i : items) { if(item.getItemType().equals("M")) { weight += i.getWeight(); } else { weight += i.getWeight() * 4.80; } itemWeight.put(i.getItemType().toString(), weight); } Based on the Google's documentation, both can be used. What are the benefits and drawbacks of each approach? Can one approach be preferred over the other? A: The second example is O(n), if you have a LinkedHashMap. The first example is O(n^2). So if you have a large collection of objects, it will be slower for the map approach. So if you have only a few objects, then you should consider using a map. But if you have a large number of objects, then you should consider the second approach. On Pentecost, the nation of Israel was given a promise which made them a part of God's kingdom by Jesus Christ. The number of believers in Israel must increase after Pentecost so that all the nations could know about the living God. But, today, the nation of Israel is under the control of the Anti-Christ. The nation is scattered and leaderless. The nation is ruled by pagan religion. Because of all these, the number of believers in Israel is really decreasing. What is the instruction given to us today to be like? Jesus wants us to be "a light to the Gentiles," i.e. not to be like the rest of the nations. What is the

Highlighting the hit-or-missness of the show's "secret" cast and the lukewarm reception, his argument for "Odd Couple" at the heart of the show being "well-done by the core actors" is fair enough, but what about John Cleese's blunder in the "Skyfall" script? Not only does he point out that he was the only extra to be directed by James Bond as "he did not get a lunch break", but he also pointed out that in a female-directed film, he would have had "one of the biggest laughs in the movie". While Cleese makes a fair point, his comments are ill-judged in the context of the recent news that Dame Judi Dench will be the female 007 in "Bond 25". She is not a "name" star. She is the Queen's representative in the Bond films. And she is the last character to hold the role. "Name" stars have typically included Claudine Auger in "Thunderball" (the first female Bond), Britt Ekland in "Diamonds Are Forever", Lois Chiles in "Live and Let Die" and Carole Bouquet in "The Man With The Golden Gun". Skyfall (2013) More recently in the Bond films, there have been Eva Green in "Casino Royale", Judi Dench in "Skyfall" and Naomie Harris in "Spectre". The main reason that the "new entry" is so far down the pecking order is that she is the only Bond girl – and she is not a "name" star. Her primary role in "Spectre" was that she is the girlfriend to Bond's "murderer". She is under-written in both films. As the "Odd Couple", Helen is "nice" and her character arc is to help Bond get over his "lack of trust" in himself. In truth, the only purpose of the "Odd Couple" is to throw Bond and Vesper off the scent that it is "them" who are hiding the
