Note An effective watercolor effect uses a filter that has a solid hue shift to create a natural-looking watercolor effect. However, the hues needed can seem a bit odd. Most online tutorials fail to mention that colors like orange and purple actually look the best with a solid hue shift. This little exercise illustrates how you can apply a filter in the simplest way possible. This technique works for many watercolor effects. 1. **Open a new image (File** → **New) and then begin painting**. In this example, the painting is slightly larger than the canvas size, but that's not important. 2. **With your pen tool, select the whole canvas and then begin to paint with dark, muted colors**. You want to add a very _distinct_ look, so you choose dark colors that have a little bit of gray in them. (This isn't a very vivid effect, so pick colors with a natural balance of hue, value, and contrast.) Once you've painted with some warm colors, choose a less intense color for the

Image Sharpening in Photoshop Elements One of the most frequent questions asked about Photoshop Elements is the manual sharpening tool. The manual sharpening tool is a nifty little tool that can be used to smooth out irregularities in an image. The sharpening tool is located in the Sharpen toolbox. To access the sharpening tool, click on the

dialog box, Sharpening, and then select Manual or Optical. Figure 1: The Sharpen tool dialog box. Once you select the manual or optical sharpening tool, click and drag on an area of the image and the tool will perform its function. Sharpening an image will add additional definition to the image. While sharpening an image generally does a good job at removing any irregularities, it doesn't always produce the intended effect. Sharpening may not take into account edges, which cause distortions or soften areas of the image. Some of the effects the sharpening tool can produce are by producing a gentle blur, which adds interest and movement to an image. Other effects include a drastic change in the focus of an image. This effect works best with portraits where the focus needs to be on the face, not the background. The manual sharpening tool will not remove any blur in the image and may leave undesired marks. If you want to remove undesired marks left by the manual sharpening tool, remove them by using the Remove tool. To use the Remove tool, select the tool from the toolbox by clicking on the toolbox icon or by clicking on the image and holding down the Ctrl key. Once you select the Remove tool, click on the undesired spot, and the tool will remove it. Remove unwanted marks left by the sharpening tool. Ashley Power Ashley Power (born January 6, 1994) is an American professional mixed martial artist. He competes in the Middleweight division in the Ultimate Fighting Championship (UFC). Background Power was born and raised in Spokane, Washington. He began training mixed martial arts at the age of 13, and signed with Fight Time MMA at the age of 16. He is fluent in English, Spanish, and Arabic. Mixed martial arts career Early career Power made his professional debut in 2012. He fought primarily for regional promotions in his native region of Washington. He compiled a record of 9-1 before signing with the Ultimate Fighting Championship in 2016. Ultimate Fighting Championship Power was expected to make his promotional debut against Joe Lauzon on November 5, 2016 at UFC Fight Night 102. However, he was removed from the bout for undisclosed reasons and replaced by Alexandre Pantoja. Power was expected to make his first title shot against longtime UFC Middleweight Champion Chris Weidman on April 8, 2017 at UFC 211. However, Power was forced from the bout citing injury, and was replaced by Cezar Arraes. Power was expected to face Brandon Davis on August 19, 2017 at UFC 213. However, Power announced his withdrawal from the bout on July 28, citing injury and underwent surgery to repair the injury. Power was expected to face Zak Cummings on December 16, 2017 at UFC on Fox 27. However, Power instead faced Andrés Galván. At weigh-ins, Power was 3 pounds over the middleweight limit of 185. As a result, the bout proceeded at catchweight and he was fined 30% of his purse, which went to Galván. The bout went the full three rounds without a stoppage and was won by Power via unanimous decision. Power was expected to face Walter Rodriguez on February 23, 2018 at UFC on Fox 28. However, Power pulled out of the fight in mid-February citing injury and was replaced by Norifumi Yamamoto. Power was expected to face Tarec Saffiedine at UFC Fight Night 129. However, in late November, he pulled out due to injury. Power was expected to face former Middleweight champion Chris Weidman on April 7, 2018 at UFC on Fox 31. However, it was reported in April 2017 that Weidman had been suspended indefinitely by the Nevada Athletic Commission due to his elevated testosterone-to-epit

What's New in the Adobe Photoshop 2021 (Version 22.4.3)?

Q: Multiple User Interface Concepts in one App I have an app that utilizes UITabBarController. However, I'm planning to add an alarm feature. What the app will do is add an item to the UITabBarController, but it will have a button that will trigger an alarm. The alarm part is easy, just use the standard Alarm Clock app. But my problem is, how will the app know the tab item that was clicked? Is there a way to add a badge to an UIButton, or do you think that I should just add a text view to the UITabBarController and set its label to the name of the view? Thanks for your help. A: I would do something like this: First, add a protocol to your custom UITabBarController class. @protocol tabBarItemClicked @required - (void) clickedTab:(int)index; @end Whenever a tab button is pressed: if (self.currentViewController == nil) { // Loading something, obviously self.currentViewController = [self.viewControllers objectAtIndex:2]; [self.tabBarController setSelectedIndex:2]; UITabBarItem *tabBarItem = self.tabBarController.tabBar.items[1]; [self.delegate tabBarItemClicked:tabBarItem]; } If this is your tabbarcontroller: @interface myTabBarController : UITabBarController @property (nonatomic, assign) id delegate; @end If you have a view controller that is a delegate of your custom UITabBarController: @interface ViewController : UIViewController @end Q: Hot to hide/close iframe? I have a popup (using an iframe). I need to close it when I'm done. This is how I'm opening the popup: function popupLoader(url, targetName, width, height) { var options = { url: url, width: width, height: height, showClose
