The Internet has become a major source of information and services, and the volume of information continues to grow exponentially. With millions of new Internet users and an increasing presence of business and individuals on the World Wide Web, the growth in Internet access and usage has grown substantially. Many organizations are focusing on the Internet as a means of increasing sales and customer service. This proliferation of goods and services on the World Wide Web has led to a corresponding increase in the amount of Internet traffic, and, the number of goods and services offered for sale by individuals on their own websites is far reaching. Internet websites and other electronic formats typically include content items with a uniform resource locator (URL) for linking the content item to a specified address on the World Wide Web. However, some Internet websites offer content items having a URL for linking the content item to the Internet website or electronic format; however, they also offer other content items having a URL which may be used to link the other content item to an Internet resource or electronic format. The conventional approach for linking the different content items involves an Internet user selecting and entering the URL, address, or other suitable means of connecting an Internet resource or electronic format in order to access the desired information. The URL or other means typically involves a systematic sequence of alphanumeric characters, which are difficult for Internet users to remember and to input on an Internet device such as a personal computer. For Internet users with a desire to link to other Internet websites or other electronic formats, the process can be even more challenging, and such difficulty can present further inconveniences. The present invention contemplates a new and improved method and apparatus for linking content items which overcomes the above-referenced difficulties and others.Archive for February, 2018 I often make note of my lifestyle choices: vegetarian for a half-century, taking exercise all the time, doing yoga, drinking my own organic milk, etc. When I forget about the Yoga for the Spouse (YFS) practice, I don't think that I will ever really forget it again! With teacher Betsy Calvary, it's a regular—every day! It's a very concrete and simple practice that strengthens the relationship. It's a way to connect the areas of life that may feel separated. We know that yoga builds confidence, vitality, and healthy relationships. These benefits come into sharp focus when a couple is trying to find their way back together after a breakup. Now, don't get

The Pen Tool allows you to draw on images. It can be used for many things, including drawing text, shapes, lines, circles, polygons, and bezier paths. The basic process of using brush, pen, or the clone tool in Photoshop involves the following steps: Photo Tools: Brush, Pen, and Clone Tools Choose a pen or brush tool from the Tools menu and click inside an area of the image. When the brush or pen is activated, you can click to create the brush or fill the space with a color. When you click to begin painting, you can drag to make the brush move across the canvas or click to move the brush in one direction. When you move the brush, you can also tilt it to change its shape. You can move the brush with the mouse in any direction on the canvas. You can also use the keyboard to move the brush. The force is measured in pixels, so a 1 pixel brushstroke would cover the entire canvas. Sometimes it can be difficult to make a precise brushstroke because the pressure you apply with your hand makes it difficult to see exactly where you are making contact with the canvas. To create a finer stroke on the brush, you can apply pressure with your finger. This makes the paint flow a lot more easily and is often considered to be the most common way to create a brushstroke. Below are some common Photoshop brush tips and tricks you should know: Shape Shifting and Dragging: Note: Sometimes pressing a modifier key such as Ctrl or Shift when using the shape tool can make a brush stroke follow an existing line or path on the image or "drag" the brush across the image. Drag a brush stroke or shape along any kind of path you can find in the image. Press the space bar or the Tab key to create a path from the current position of the brush to the destination. Press the letter "A" to activate the anchor tool Press the letter "S" to activate the shape tool Press the letter "D" to activate the shape tool and "DRAG" Press the "Z" to deactivate the shape tool Bring the "zoom" tool to the picture Drag the brush on the picture, then apply any shape to the image. Tracking with the Line or Path Tool: Use the Line tool and the Paths options of the Adobe Photoshop Tool
