Lightroom Adobe's premiere program for image management and image editing is Lightroom. This software was developed with professionals in mind and is the same program that the pros use for management and editing of their images. The software supports RAW files. When importing images, it will adjust the white balance automatically. It will import the correct exposure, white balance, and color settings based on the color settings you chose when importing the images. Adobe promotes Lightroom as a simple, powerful tool for image organization, editing, management, and image sharing. It also automates most of the functions of a traditional darkroom in a desktop program. However, with a few shortcuts and a bit of training, Lightroom can do most of the work for you. Like Photoshop, Lightroom has several features that enable digital photography professionals to edit and enhance images.

What Features Do Photoshop Elements and Photoshop Have in Common? Many of the features in Photoshop and Photoshop Elements are quite similar. Both products contain layers, masks, selection tools, the ability to undo and the ability to batch-edit images. Photoshop Elements contains more simple editing functions and photo-editing tools. Photoshop contains more professional-quality editing tools. Figure 1-1: A simplified version of the Photoshop Elements user interface. Editing Functions Both Photoshop Elements and Photoshop have layers for editing images in Photoshop. You can use the layer tools to add and remove parts of an image. You can use the selection tools to select parts of an image to edit. The basic tools are the same in both programs, but Elements includes a few additional features. Figure 1-2: A layer (on the left) and a selection (on the right). The ability to edit images with layers is a relatively new feature of Elements. Although some images with millions of pixels can be too large for the standard layer tool windows, Elements has a scaled-down version of the layer tool. It can make it easier to select a specific area on an image because the user interface is small. The same scaling is also true of the selection tools. Photoshop Elements and Photoshop share the same selection tools for most photo-editing features. The modes available in Photoshop Elements are not available in Photoshop, but you can save selected areas to a new layer in Photoshop. Elements offers a few advanced selection tools that are unique to it. You can click once on an image to create a new layer (see Figure 1-2). You can also set a bounding box by clicking anywhere in an image, selecting the desired rectangular area and dragging. When you release the mouse button, the rectangular selection will be applied to the new layer. You can right-click anywhere on an image and select "New selection" to create a new selection. You can quickly copy, paste or delete layers, and move or resize layers and frames. You can also use the clone stamp and healing tools. Figure 1-3: Selecting the rectangular area around a corner of a building. To remove an area, double-click a corner of the area or click an area of another layer. You can also select the four-sided area and then choose "Delete Layers." All of your layers for editing are contained in a new window, which is called a workspace. You can open as many workspaces as 388ed7b0c7

Senator Robert Widen from the State of New Mexico recently introduced a bill that would reduce the amount of lead and cadmium found in children's toys and drinking water. By requiring manufacturers to build new plants using alternative technologies to those currently used, the reduction of hazardous metals in products would be significantly improved. The Senator's bill, entitled, "An Act Preserving Our Children's Health and the Environment by Increasing the Hazardous Substance Ban," gives special treatment to the hazardous metals used in consumer products. Importantly, the toxic metals can be found in children's toys, as well as in our water. In addition, this legislation also establishes tougher requirements for the leaching of hazardous chemicals from manufacturing processes ("leaching byproducts," collectively known as "MERR substances"), and specific energy efficiency standards for those facilities. Keep in mind that this bill would not only reduce kids' exposure to toxic metals, but would also save the planet. The Energy Information Administration recently estimated that costs of carbon pollution, from the use of fossil fuels, would increase the price of electricity by about $2.50 per ton.1 Meeting President Obama's pledge to cut carbon pollution 25 percent below 2005 levels by 2025 would lower electricity costs by $475 billion. 2 As a graduate of the University of Virginia, Senator Widen understands that our children's health is a top priority. For this reason, along with the other Senators and Congressmen introducing similar legislation in their states, he is urging other lawmakers to introduce the same bill. Here are some of the top achievements made by lawmakers in their states: Provide rewards of up to $10,000 to persons who inform law enforcement and child protective agencies about hazardous-materials violations that endanger children. Ban the sale of children's products made with hazardous substances, and require retailers to prominently label products made with these substances. Ban the sale of children's products that contain heavy metals that can make their way into the tissues of young children. Ban the use of hazardous substances in products and work practices that could harm children. Establish minimum federal hazardous-substances standards. Establish federal requirements for the safe handling and disposal of dangerous chemicals. Tax the manufacture, importation, and sale of hazardous substances. These proposals are the beginnings of many steps that could help to protect our
