Have you ever thought how Photoshop elements is created? Photoshop is a very popular photo editing software. It has lots of powerful features like rotating the photo, adding text, colors, motion blur effect, sharpness effect, and much more. In this Photoshop tutorial, we will have a look at how to create a much more creative photo like this using Photoshop Elements. We'll also learn how to edit the Photoshop elements file into a professional file using Photoshop.

There are two programs you must get before starting this Photoshop tutorial. Start Adobe Photoshop Elements. The following explanation of the Photoshop Elements program is kept as simple as possible. If you have never used Photoshop before, then it might take you a while to get used to all the features. Click Edit and then click Photoshop Elements from the menu. The main Photoshop Elements window will appear. On the top of the window, click Images. The Images window will appear. Click New, and Photoshop Elements will prepare to add a

new image. Click OK, and Photoshop Elements will generate a new image file. Click File, and a new window will open. Click Open. A new window will open, and you will see the new image file. You can also see a number next to it representing its size. Let us edit the original image. Click File, then click Open from the menu. A new window will open, and you will see the original image. After you have opened the image, you may see a lightbox. We can edit the image directly here. Click on the tool bar. The Menu window will appear. Click Edit, then click Free Transform, and the Free Transform Tool window will appear. The type of transformation we are going to create Select Object Use the Tool Options bar to choose the special type of transformation. Transform > Transform Object > Free Transform. Draw the anchor points Click and drag to make an anchor point. The first point drawn will be Anchor 1, and the last point drawn will be Anchor 2. Click the anchor points to connect them. Click and drag to make a second anchor point. The first point drawn will be Anchor 3, and the last point drawn will be Anchor 4. Click and drag to make a third anchor point. The a681f4349e

Q: How can I desaturate an image for an android app? I am developing an android application with a palette of colors. One of the images that is on that palette has to be desaturated. I have researched how to desaturate an image, but found many posts on how to desaturate it pixel by pixel, which is not what I want to do. I want to desaturate the colors completely and be able to manipulate the resulting image. How can I do this in android? I know that I can get an image from gallery, but if there is another way of doing this I would prefer that because I would like my app to be able to do this operation on any image. A: Android is built on top of Java, which means you can use Java libraries for the job. One of them is the software framework: JavaFX, a Java library to build native UI Java apps. Visualizing Your Data on an Android Device with JavaFX/Java That's because JavaFX has the so called paint utility, which basically allows you to apply effects. Using the apache POI library, with the HSLColorModel, you can desaturate the image pixel by pixel.

```
public static void desaturate(BufferedImage image, int desaturation){ HSLColorModel hsl = new HSLColorModel(desaturation); ColorSpace cs = ColorSpace.getInstance(ColorSpace.CS_GRAY); WritableRaster raster = Raster.createInterleavedRaster( null, new Rectangle(0, 0, image.getWidth(), image.getHeight()), new HSLColorModel(ColorSpace.getInstance(ColorSpace.CS_GRAY), hsl)); BufferedImage newImage = new BufferedImage(image.getWidth(), image.getHeight(), BufferedImage.TYPE_INT_ARGB); Graphics2D g2 = newImage.createGraphics(); g2.setColor(Color.white); g2.fillRect(0, 0, image.getWidth(), image.getHeight());
```

Q: How to change size of output from mongo shell In mongo shell I can get output from the last 20, 50, 100 command. I'm trying to do something like: asadmin> mongo "mongo dba.system.mongoddb --help" asadmin> "mongo dba.system.mongoddb options" [Output: { "documentId": "801546b6e5621fca01f71d65b4712b12", "index": "system.oplog.rs", "opTime": "2016-03-01T06:21:23.834+0000", "opId": "3b29d63e8d226b060c4938f2e7184ff1", "replyToMaster": true, "masterSource": "primary", "source": "primary", "type": "c", "wireVersion": 2, "maxWireVersion": 2, "typeName": "MongoDB", "dbname": "dba", "collectionName": "system.oplog.rs", "namespace": "system.mongoddb", "resolvedOptions": { "tlsSettings": { "sslEnabled": false, "sslCertificatePath": null, "sslCertificatePassword": null, "sslRootCertificates": null, "sslPemCertificatePath": null, "sslPemCertificatePassword": null }, "fsync": { "fsyncEnabled": true, "fsyncInterval": null, "fsyncCheckpointInterval": null, "fsyncSplitInterval": null } }, "recoveryMode": "net" }] [asadmin] exit ERROR: : unexpected response: 503 As I can see, mongo shell can output to some log file using --logFile, but what I can see is only copy a number of output to my local machine. I can change size of output from 10 to 200, 500, 1000. I would like to get exactly 200 lines of output using mongo shell. A: You can use the --quiet parameter. You can use the -q parameter to use the former curl approach to get the last 500 records. > mongo --quiet "mongo dba.system.mongoddb --help" > db.
