K.Tamasauskas Rimvydas Stropus Zmogaus anatomija.pdfVolatile compounds of Giardia duodenalis (Trypanosomida, Protozoa): enhancement of alpha-pinene volatiles by proteolysis and preservation during drying. The volatile compounds of Giardia duodenalis trophozoites (infective stages) obtained by aqueous freeze-drying and rehydration in air were analysed by gas chromatography coupled with mass spectrometry. The amounts of alpha-pinene obtained by fresh trophozoites were 3.9 microg/gdry cells, but it was significantly increased to 13.6 microg/gdry cells when the parasites were freeze-dried and rehydrated with 0.1 M L-cysteine. A high relative concentration of other compounds such as iso-alpha-pinene, eucalyptol, menthol and p-cymene was found in trophozoites than in cysts. The change of the volatile compounds during freezing, freeze-drying and rehydration was also studied. Although the volatile compounds of freezing-dried trophozoites still contained alpha-pinene and iso-alpha-pinene, they had not changed significantly after rehydration in air for 1 day. This indicated the satisfactory preservation of the volatile compounds of trophozoites during freezing, freeze-drying and rehydration.Quick Action There's no denying that the United States and Vietnam have a long history together. We've been in this conflict for over a half-century. We've invested a great deal in our relationship. Both our country and our Embassy in Hanoi have a moral responsibility to stand by the people and government of Vietnam as they seek to rebuild their devastated country. The United States respects and values the progress we have made, but both our countries have a shared interest in seeing Vietnam succeed in the future. Hanoi has a special place in our hearts as it represents the first time that American forces were welcomed into a Communist country. Today, we have allies with whom we still stand strong against the likes of the Taliban, Boko Haram, and others who are working to spread their brand of extremism. Today, the United States is the world's single largest provider of humanitarian assistance and remains deeply committed to helping the people of North Korea, which continues

A: Try this: awk '{if(length($0)-n!=0){print $0;}}' or use sed's substitution: sed -E's/^(.{0,})(.*)$/\1.\2.\3/g' Q: How to return value of a promise I have to make a call to 2 or more API's and since these calls are quite big I only want to know how to return them once my promise has fulfilled. The thing I want is something like this: (1) check if (somerequest) has anything to return in the first place. If the response has something to return I want to return that. If it doesn't I need to call the second api. (2) if the first is still running I want to return the result that it gives me. (3) if the first call is still running, the second request is not started, so I want to return some kind of error code for if the second call failed. (4) if the first call has finished but the second request is not finished yet, I want to return the result of the first request. So, what I was thinking, is using a promise inside another promise: function myfunction(params){ var Promise = require('bluebird'); return new Promise(function(resolve,reject){ setTimeout(function(){ if(somevariable==false){ return reject('error'); } else{ return resolve('hello'); } },1000); }); } But I'm not quite sure if that's the way to go. A: There is no way to do that natively. I'd suggest that you wrap the API calls in a single promise and then return the promise. Something like this function get(url){ return new Promise((resolve
