must .Q: Is it a good solution to store the Serial Number for Android? I'm developing an Android application that needs to be the Serial Number for one of the device. The problem is that when user replace the device, the application installed will be useless to him. I wonder if it is a good solution to store the serial number in a database and later, send it over network to see if the newly installed application is the same with the old one. I'm thinking of a SQLite solution like this: `public void insert() { string tableName = "SerialNumber"; string columnName = "SerialNumber"; var`

```
conn = this.context.Database.OpenCo
nnection(); conn.ExecuteNonQuery(C
ommandType.Text, "CREATE
TABLE " + tableName + " (" +
columnName + " TEXT NOT NULL
PRIMARY KEY);" ); var cmd =
conn.CreateCommand();
cmd.CommandText = "INSERT
INTO " + tableName + " VALUES
(" + this.SerialNumber + ")";
cmd.ExecuteNonQuery();
conn.Close(); } Or, is there another
way to identify the application
installation? I'm thinking about the
PackageName, but is there any other
way to identify the application
```

installation? EDIT I think I made a mistake on my code. I didn't really consider about Android L system version. I should explain more. I hope this will help to find a solution. I'm using Google's recommended code:

```
private static final String TAG =  
"Android SQLite"; private static final  
String DATABASE_NAME =  
"my_database"; private static final int  
DATABASE_VERSION = 1; //  
Create database private static final  
String DATABASE_CREATE =  
"create table if not exists" +  
595f342e71
```
