For any month of the year, it's the most requested film ever. For any movie released in 2007, the James Bond villain was the most requested. No matter what it was, the $26 million movie was the number one requested DVD on Amazon.com. Cynthia Rothrock, who played Bond's leading lady, is the owner of the most requested DVD. "I had no idea that it was going to be so popular," said Rothrock. "There is something about James Bond that people find attractive and they love being able to keep it on and sleep with it." In 2007, other movies that were most requested on Amazon were the film The Day After Tomorrow, with Matt Damon and Kate Winslet, and Titanic with Kate Winslet and Leonardo DiCaprio. Much has been made about the fact that this is a huge coup

for Amazon, but there are some who are less impressed. "They're making money off of consumer ignorance," said Adrian Raoult, who owns Nightcaps and Tobacco, a DVD store on Campus. "A lot of people will go online and order stuff, but it won't come and they'll have to be shipped home and that's going to cost a lot," said Raoult. "Most of the time when people go out into the world and get a product they don't have any idea what they're getting into. It's going to be a consumer issue," said Patrick McDonald, a consumer advocate from the Environics Institute. McDonald said there are other businesses that will capitalize on the recent success. "I think they'll be some sort of pop up retail store where you can get James Bond DVDs, but I think that will be the extent to which it will happen," said McDonald. McDonald said this is just one of many examples of what he calls the

'consumption revolution'.Q: Is there any order to the tests in the MFL site? I'm a little curious about the order of tests since I have heard of people just running through the test lists, but is there an order to them? I've heard that tests 1 and 2 are for the key functions, but what about the rest of the tests? A: There is no "order to tests", but one should run through the test suite because it represents the whole of the system. The various functions are meant to be independent from

The Gulliver's Travels of Andy Sandhaus, dedicated to the sweet sound of bow thrums. Last weekend I posted a suggestion of Gulliver's Travels as a browser plug-in, and I actually dug up a few alternatives for you. My thought was that if you had a portable

system and wanted to read Gulliver's Travels when you had a spare moment, or were reading in a part of the world with online book stores and you found yourself with a download of the Kindle edition, but not quite enough time to read through it, you could use an online reader. Whether you need a browser plug-in, or something you can download, these are a few that are available... I wanted to try and create something a bit more robust, so I ended up writing my own. The result is still a pretty simple program, but it does provide a number of features. The major ones are as follows: Warns you when the database is getting close to being full. Has bookmarking feature - Open and read the chapters you are currently interested in, which allows you to avoid having to look things up. If you are currently on a chapter, you can change to the next book in the book list (or highlight the

next book in the book list, if you are already on that book). You can save a bookmark, and return to that bookmark later. Bookmarks will show you pages you have already read, in case you are perusing the book for something in particular. It is designed to be portable, so has a small executable, which is roughly similar to the size of the Firefox plug-in. For those of you who are interested in becoming a developer on your Linux system, I made it compatible with python 2.4, 2.5, and 2.6. If you want to get a copy of the code, it is on GitHub. And I have posted the results of some first impressions testing of the readers above. The list is in "order", i.e. those first listed are those that did the best reading through the book. All of the readers had the same number of chapters to read through. The first one, Delicious, never gave warnings for being full, it quit after finishing. The second

one, XYZ Reader, crashed a couple of times as the database got nearly full, so I had to quit. The 3rd one, Readium, worked best,
