1. Field of the Invention The present invention relates to an improvement in a synthetic resin water drainage tube, and more particularly to a semi-spherical water drainage tube made from a synthetic resin having a self-plugging property. 2. Description of the Prior Art There are various types of conventional plastic water drainage tubes, one of which is shown in FIG. 1. This type of water drainage tube is generally a hollow tube having a fine perforation at one end of the tube and being crimped at the opposite end to retain a coupling fitting therein. Such a water drainage tube is deficient in that the perforation in the tube is never completely plugged, and therefore, fresh water and toxic matter contained in sewage (hereinafter referred to as water) tend to permeate into the atmosphere through the perforation. There have also been proposed other types of water drainage tubes which are intended to avoid a permeation of water through the water drainage tube. An example of the prior art water drainage tube of the type described is shown in FIG. 2. This water drainage tube is a semi-spherical hollow tube having a self-plugging section adjacent to one end of the tube. The semi-spherical hollow tube is generally molded of a synthetic resin having self-plugging property, and has an air channel which communicates with the center of the hollow tube. The above-described water drainage tube has the self-plugging section fixed at a predetermined portion of the water drainage tube and therefore cannot be removed from the water drainage tube. Accordingly, the prior art water drainage tube is very inconvenient since the water drainage tube cannot be removed unless the coupling portion thereof is completely unscrewed.

Harness (horse) A harness is a system of equestrian equipment that allows for the control and restraining of a horse. Harnessing is divided into four categories: Full, half, pommel, and ground. A fully harnessed horse is highly controlled on all four feet, including the hind legs. For both full and half harness, the buttocks are secured and the girth is confined. For pommel harness, the horse's back is rigged up. The ground control is usually an additional bridle. Proper harnessing must be done so as not to interfere with the horse's locomotion and so that the horse's comfort is not compromised, so there are different strengths for various applications. Full harness Full harness is the most serious type of harness and is sometimes called

What's New in the Photoshop CS4?

Q: Determine if svn:// or In a bash script, how can I determine which version of the SVN protocol I'm dealing with? I've tried with `if [-z "$SVN_URL"] || [["$SVN_URL" == */*]]` but this doesn't work when I have a URL in my variable:

`SVN_URL="svn://example.com"` A: I agree with Michiel: the right check is to search for `::`. But you can also use this check to figure out the user's svn URL: `str= $(svn info |`

grep user@ | sed 's/.*=> //' | cut -f3 -d ' ') /path/to/svn/repos/ on A: The proper way to check if the URI is a SVN URI is to check that the server starts with svn://. `svn_prefix=$(svn info | grep '^svn: SVN location' | sed -e 's/^.*=> //' -e 's/.*=> //')` if `[[${svn_prefix} == */**]]` then # Matches svn:// fi A: `svn info` (ex: `svn info svn://server`) has several output fields you can use: field
