The Photoshop Learning Center at `www.adobe.com/resources/pro/photoshop/quicktips/photoshop_quickshot.html` has some good tips that will help you get started in Photoshop. In this chapter, I show you how to use Photoshop to tweak the image of a person's face in Figure 4-2. I start by showing you how to adjust the settings for the image. Next, I take you step-by-step through the process of creating a new layer, creating a gradient to use for the texture of the surface the face is resting on, coloring and blurring the face in front of the textured background, masking out the textured background, desaturating and increasing the saturation of the colors on the surface, adjusting the highlights and shadows for the face and overall colors, and finalizing the portrait. **Figure 4-2:** An example image that is used for the face-correction procedure in this chapter. Figure 4-2 shows the example image that I use for this procedure. Although it isn't necessarily a bad face, I want to create a cool contrast portrait where the subject stands out in front of a plain background. The cool effect can be achieved by creating the final background (which I do in Step 1) to be black, white, or any color that has been desaturated, using a strong gradient. Then I mix the colors by applying a small color mask over the bottom half of the background to reduce the overall effect of the black and white background (the bottom half of the background is tinted in step 5) and, to increase the brightness of the face and overall colors. Photoshop has a number of adjustment layers, which I show you how to create in this chapter. In addition, this chapter presents a number of new features that have been added to Photoshop CS5: Photoshop Elements and Photoshop. In this chapter, I use Photoshop CS5 with the 5.0 version of the CS5 64-bit engine. Photoshop CS5 is available from the Adobe website, `www.adobe.com/products/photoshop`, as a separate downloadable.psd file. You can also download Photoshop Elements 5.0 for Mac OS X v. 6.1, available from `www.adobe.com`. Creating a New Layer for the Background The most important step in this tutorial is the creation of the background, which I begin in Step 1. Figure 4-3

Want to learn how to use Photoshop? You can check out the Photoshop 101 tutorial that will show you how to use Photoshop the right way, and give you a basic idea of how to use Photoshop. The Top 10 Best Photo Editing Software For Windows Free software and Photoshop Elements are just a couple of the many image editing options available to you. You don't have to spend a fortune to use your image editing software in the best way possible. Digital Arts Editors noted that, in their overview of the top 10 photo editing software, the top 2 programs, Photoshop and Photoshop Elements, were both free and available in the WinAppStore app. However, Microsoft Paint is also free and packed with image editing features. Photoshop Elements is a much better option for beginners, as it gives you a simplified interface. However, Photoshop is much more feature-rich. From our small market research we've compiled a list of the top 10 best photo editing software for Windows. Some are open-source software, but they are generally not very well-known. [Art of Photography] Photography Software & Apps is one of the best software on the list that is all in one app. Photo editing features, cloud storage, RAW support, 2GB+ of free storage and back up for around $12, what more could you ask for? The GIMP for Windows is another great and open-source option that allows users to edit images and a whole range of elements. It's free and comes with excellent options for photo editing. Another major option on this list is Photoshop Elements. It's very popular in creative circles, and is a great choice if you're a beginner or amateur photographer. Adobe Photoshop Elements is a great alternative to Photoshop. It's the basic version of Photoshop which allows you to carry out basic edits to your images. Great stuff! We really like that the top image editing programs for Windows are all "all-in-one" apps. This means that, in addition to being a good alternative to Photoshop, you don't have to download a different application to edit your images. As TechRadar puts it, Lightroom is "the photographer's best friend." This is the app that professional photographers use to store and edit all of their images. 388ed7b0c7

When an evangelical ministry believes that God is calling it to use violence against human beings, there is no price that can be too high for them to pay, including the murder of children. That is where we are today. Written by Tony Perkins The murder of little ones is the ultimate act of evil. It is the ultimate violation of God's commandments, laws and rules. When an evangelical ministry believes that God is calling it to use violence against human beings, there is no price that can be too high for them to pay, including the murder of children. They would rather live in comfortable pew-sitters than follow the biblical command for them to obey God. That is where we are today. The issue at hand is whether this evangelical ministry should use its clout and its money to influence the government to use force against a woman in defense of the unborn. The abortion industry is a multimillion-dollar industry, largely because they actually do receive protection from the federal government. The only way to effectively fight back against an industry and its minions is with the full force of the government. If pro-life leaders, evangelicals and conservative Christians do not challenge the actions of the Obama administration, we will see the same Supreme Court that has blocked us from fighting Planned Parenthood and the abortion industry continue to dominate the federal bench. Until America's courts decide that the right to life for the unborn is self-evident, there will be no stopping the slaughter of innocent children. There is no "safe" way to end a human life except through natural means, and that is not what the evangelical movement professes to be about. Here is the truth of the matter: if we do not play by their rules, they will do anything and everything to stop us from organizing and evangelizing to save the lives of human beings. That is where we are today. You and I must face the reality that if we do not act, in a few short years little children will be the great majority of the victims of the abortion industry. That is why we should be preparing ourselves for the possibility that in the future we might see young children and teenagers ruthlessly murdered by abortionists so that government health officials can use that as just another reason to demand that mothers kill their children in the womb. When abortionists target the vulnerable and defenseless in our society, they are making a mockery
