How to pass in an array of variables to a function in Javascript I have an array of 10 objects called contacts. Each contact object has a property called name and age. How can I pass in a value for name and age and write the results to the console? I thought the following would work: `contacts.forEach(function(contact) {`

`console.log(contact.name, contact.age); });` However, when I run this, all the values for age is the same, and none of the contact.name values can be found. How can I pass in the values of contact.name and contact.age so I can do something like this?:

`contacts.forEach(function(contact) { console.log(contact.name, contact.age); });` I am passing this script into a Facebook messenger bot, and I need to be able to pass in the values of these variables in the actual script. Any help would be greatly appreciated.

A: `contacts.forEach(function(contact) { console.log(contact.name + ',' + contact.age); });` The present invention relates to a solid-state image sensor and its production

method, and more particularly, to a CMOS (Complementary Metal Oxide Semiconductor) type solid-state image sensor having color filters for reading out an electric charge generated in a photoelectric conversion portion, or a method of producing this solid-state image sensor. Recently, a solid-state image sensor having an interlayer insulating film on a photodiode portion formed in a silicon semiconductor substrate and color
