Prerequisites: 1. A copy of Simple SQL Backup is already installed on your computer. For installation instructions, see the back of the package. 2. A copy of the database named "Sample" is already installed on your SQL Server. 3. You have already created a user account named "SimpleSQL" with a password of "SimpleSQL". 4. You have already created a database called "Sample" on the SQL Server. In this step of the Simple SQL Backup

demo, we will be backing up the database named "Sample". First, we will make sure that you are connected to the database whose database will be backed up using SQL Server Management Studio (SSMS). Open a SQL Server Management Studio window and connect to the database on which you wish to run Simple SQL Backup. After you have connected to the database, we will perform a backup operation on the database we wish to backup. In this case, the backup will be "backup_Sample_Test". Once you have completed the backup, we will make sure that the backup will have been created successfully. To verify that the backup operation has been performed correctly, open SQL Server Management Studio and connect to the database on which you wish to run Simple SQL Backup. 1. On the left of the SQL Server

Simple SQL Backup is a free software program intended for use by network administrators. Simple SQL Backup makes performing an immediate backup of a SQL Server database very easy. Simple SQL Backup works on any edition of SQL Server 7.0, SQL Server 2000, or SQL Server 2005. This article will guide you through the install of Simple SQL Backup on either Windows Server 2003, 2008 or 2008 R2. As the download file for Simple SQL Backup is a.zip file, this article will provide instructions to unzip the downloaded file. 2. Unzipping Before you can perform the install of Simple SQL Backup, you will need to unzip the downloaded Simple SQL Backup file. To unzip the downloaded file simply double click on the downloaded file and the original ZIP file will open. You will see a folder called "Simple SQL Backup Beta" this folder contains folders, one for each edition of SQL Server i.e. "SQL Server 7.0," "SQL Server 2000," and "SQL Server 2005." For this tutorial I will be installing the software on a computer running Windows Server 2003/2008/2008 R2. 3. Installing the software Right click on the Simple SQL Backup folder and select "Install." 4. Configuring the features When the download is complete and the installation has been completed, you should see a "Setup Complete" message. There should be an option to start configuration wizard now, click on OK. You will be presented with a screen called "Installation Summary." This screen displays all the features of the

software. Click on the checkbox next to the feature you want to use, you can add as many or as few as you wish. For this tutorial, I will be using the first option, "Backup of SQL Server databases" Next you will be prompted to enter the server name or IP address that you want to use for the backup. You can do this by either typing the server name or IP address or by using the browse button. If you want to use a more complex path to your SQL Server you can enter this path in the "Windows Path" field. If you are using SQL Server 2005, you should enter the full path of the server, that is: the IP address, the server name, the port, and then the path of the database that you wish to backup. E.g. to backup a database called sample, on a port number of 1234, simply b7e8fdf5c8

Simple SQL Backup (SQL Backup) is a simple and easy to use utility. It makes performing an immediate backup of a SQL Server database very easy. Simple SQL Backup works on any edition of SQL Server 7.0, SQL Server 2000, or SQL Server 2005. Features: ⬜ Immediate backup - You can take a backup right after setting up the database connection, without closing the connection and losing the changes made. ⬜ Easy to use - The program's main window has 2 panes. The left pane is where you enter the SQL statements to be executed on the server, and the right pane is where you enter the backup window information. Simple SQL Backup automatically extracts and makes backups of the SQL Server data files on the client machine. Simple SQL Backup does not require a compatible server because the server-side operations that store the SQL Server backups are performed on the client machine. Simple SQL Backup makes it easy to create a backup and restore it to a different SQL Server instance, or even an SQL Server database of the same name! Simple SQL Backup is a fully featured executable. Although it performs a SQL Server backup, it has support for any edition of SQL Server.
