When the image opens in Photoshop, you're presented with the new document window, as shown in Figure 2-2. **Figure 2-2:** Photoshop's version of a filing cabinet. Photoshop runs only in Windows. Editing a Layer Most important when editing layers is that you edit the layer you want to change and any layers directly below it. When you make changes to a layer, it will become a new layer. Layers can be deleted; you'll learn how to do that in the next section. Photoshop has many tools to help you edit the current layer. Figure 2-2 shows the Layers palette. From top to bottom, each area represents the following: * **Layers:** The area to the left of the layer thumbnail represents layers. (The triangle to the right of the layer thumbnail is a toggle to flip between viewing and editing the current layer.) The Layers palette has its own drop-down list, and you can also toggle through the views that correspond to the scroll bars on the right side of the palette. * **Drawing Tools:** You can use these tools to create new objects on your layers. The horizonal lines correspond to the handle types you create with these tools. * **Filters:** These tools allow you to add effects to layers. * **Channels:** These tools control how the layer's pixels are combined. You use channels to make images monochrome. * **Paths:** You can use these tools to make a selection of an object on a layer. * **Photoshop Actions:** These tools add or edit effect layers. * **Brushes:** These tools are the last tool group of this area. You use brushes to edit the layer by creating new objects on the layer. The brushes are simply the brushes that came in the box with Photoshop. You have 50 Adobe-branded brushes, but you can easily use your own custom brushes. You can even work with Layer Styles, which adds an additional layer on top of the layer. Adding

Q: When and how do I call the content database? When I say when do I call the content database, do I call it directly from SQL Server or do I have to specify the name of the content database first? For example, would it be something like: select * from [name of content database].dbo.table I'm new to SQL Server and working on a third-party system at the moment. Thanks! A: Depending on your version, you may need to specify the database name for the connection string (if you're connecting to multiple databases in one app). If that's the case, you just need to provide the name of the database you're selecting from. Editor's Note: Coaching Camp is an occasional column, profiling a Texas high school football head coach. Check back regularly for more profiles. Facebook, Twitter, online journals, message boards. They've all done their part in the blogging revolution, but few things are more important, or more dominant, than a good old-fashioned face-to-face conversation. But those face-to-face conversations, too, can be controversial, especially in an area as small as Southlake, where preconceived notions of a particular coach still resonate even in the face of fierce competition. But no matter how you feel about the coaching profession, it's safe to say that there's a reason people across the nation start coaching careers: it's a vocation that has a sense of pride and meaning outside of its monetary value. In the case of Lake Travis head coach Matthew Donahue, he's not here to win games on a regular basis. He's here to make "the world a better place," and the good news is that he's taken the head coaching gig as the perfect platform for doing just that. His special teams, his attention to detail and his insistence on pushing his players to think outside the box have helped to create a competitive atmosphere that his players carry into the classroom -- and out on the field -- every day. Both his and his players' commitment to the well-being of the community is a credit to both men and shines a light on just how much damage a single player can do to a program. Donahue's unique coaching style isn't just a one-man show. He's been hired by the highest-ranked recruiting class in school history, and the talent level that the program
