The past 12 months have been exciting, with advances in the field of medical imaging leading to new insights into disease and patient care. Now that 2017 is underway, our partnership with NVIDIA has enabled us to leverage the power of deep learning to create DREAM (Diagnosis, Representation, Estimation and Monitoring) Challenge, a contest of image classification models. As the first phase of the challenge, our teams have begun assembling models to detect abnormal brain activity. This is the domain of psychiatry, where MRI's have led to a better understanding of the brain's structure, or morphology, and dysfunctional activity, or metabolism. The image classification component of the challenge allows us to train a machine-learned model to accurately detect abnormalities from a large number of brain images. The program files are stored in the directory C:\Users*USERNAME*\AppData\Local\VirtualStore\Program Files\and it is almost a program called Faces. You should find two folders: (1) Medi's and (2) Settings. Within these folders, you'll find three folders called (1) Processed, (2) Original and (3) Settings. Only the first two folders contain files. The original folder, Original, contains the original photos you took; the process is based on the modifications you make to them. The settings folder contains the settings you use to apply effects to the photos. Usage The program works with three different kinds of photos: — transparent over a white or black background, — black-and-white photos that require a black backdrop, and — photos that don't need a backdrop at all, i.e. photos that don't have a white or black background. It is a substitute for the "Face Swapper" function in the Photo Impairment Control Panel program that is built into Windows 8. I bought this program because it seemed to be something that I could do with my images. However, the program is limited in that it can only swap the photos and has no animation. With iSwap Faces for Windows 8 it takes about 5-7 seconds to make a swap and that is really too long for what I was expecting. But it is still good to know about it and it can be used to learn about PhotoImpairment. PS: As a bonus, you can also create a new album from any of your photos and then have them all grouped into a collection. This is great for organizing your photos. Hi. Good to have a program like this. I would like to see a program like this that can do an automatic swap of the photos as well, as in auto swap for all photos in a folder with a timer. iSwap is easy enough to use, it's just too slow. It is a bit annoying that it makes a new folder, so you have to make changes and add that to the new group. The one feature I find missing is that you can have face swaps in your images when you do a save, but you can't have them in the image at the time of picture taking. (There should be a way to save Face Swaps into the image at the time of picture taking.) It is a bit annoying that it makes a new folder, so you have to make changes and add that to the new group. I ran into this too. I emailed the author, and he fixed it for the next version (which he was kind enough to make for me). With version 2.0 (which came out on September 8, 2012), the feature is back (although it's not perfect). However, when you select to delete the new folder (in the original folder), it'll automatically skip the titlepage, page 1, page 2 and page 3 page headings, with a scary warning that it's deleting those pages, and they
