MonetDB is a distributed database developed by Intel to offer transactional integrity of data stored in a distributed, shared-nothing, high-performance computing environment. MonetDB is highly scalable and offers a large number of performance-optimized data types to exploit the characteristics of the underlying distributed computing infrastructure. The database technology has been licensed to third parties to allow for greater application range and business opportunities. Using this tool, developers can efficiently manage and export schema data with the click of a button from Microsoft SQL Server to MySQL. MySQL Import Schema Wizard helps users to export schema from MySQL to Microsoft SQL Server without writing any code. This tool is a feature-rich application that helps you to export MySQL

---

schema to Microsoft SQL Server. It offers various functionalities to make your jobs easy and less time-consuming. With this application, you can transfer data from SQL Server to MySQL easily and quickly, even if your data source is an Azure MySQL Database or Amazon RDS MySQL Database. MongoDB Java Driver is a data access library for the Java application programming language. The goal of the library is to provide a portable, data access abstraction for MongoDB. By allowing java developers to create driver components that are independent of the server, they can deploy the driver to new or different types of platforms as they migrate to a cloud environment or they run inside an application server. They can use the driver library to create high performance database applications running on any platform b7e8fdf5c8
