are lots of other useful XPath expressions to get specific text nodes, though it would be useful if you could give a little more info on exactly what you want the text for. A: This program shows you how to do it:

```
$dom = new DOMDocument();  
$dom->loadHTML($html); $xpath = new  
DOMXPath($dom); foreach($xpath->query("//p") as  
$node) { $text =  
trim(strtolower(str_replace('textContent'), '')); echo  
$text. ' '; } The Effects of Intracellular IP3 and cAMP on  
Mitochondria d0c515b9f4
```

--- layout: page title: "Q69337: Using Command Arguments with Binary-and Operator" permalink: /pubs/pc/reference/microsoft/kb/Q69337/ --- ## Q69337: Using Command Arguments with Binary-and Operator Article: Q69337 Version(s): 3.00 Operating System: MS-DOS Flags: ENDUSER | PRINT\_EXACT\_NAMES Last Modified: 11-MAR-1988 Using the CPY command, it is sometimes convenient to access command arguments before you execute the command, and for that purpose, the DOS and MVS versions of CPY allow you to do it using the binary-and operator (&&). For example, you can create a file in the CPY current directory by using this syntax: CPY file1.txt && MD file1.txt The command actually executes as follows: CPY file1.txt file2.txt && MD file2.txt file1.txt Note that, if you precede the && operator with a -1 argument, it performs a "Don't execute the following" function. If no argument appears, the default is "Execute the following." If you precede the && operator with a -1 argument and no arguments follow, CPY simply writes the letter "C" in the current directory, and you get a "command line error" message. The binary-and operator is a convenience feature in CPY and MVS. However, there are still limitations for using && to apply changes to multiple commands (MSDOS and MVS). Although in MVS you can use && to execute two commands, it's not possible in MSDOS. Note that many people have successfully used && to execute several commands using CPY. The following illustrates a common problem. You'll see that CPY will not let you execute a command and have CPY execute a command-shell batch file. You could use the -2 option to CPY without a -1 argument to execute the shell command.
