Install game to a USB flash drive or directly to a DVD or Blu-ray.The overall goal of the proposed study is to examine the influence of sexual orientation on the mental health outcomes of adults and gay-identified adolescents. Previous research has found that the majority of gay-identified youths maintain high levels of psychological well-being, and recent research has found that the majority of the general population report elevated levels of depression and suicide-related ideation among gay identified adults. However, the mental health of gay-identified youth, particularly lesbian and bisexual youth, is largely unknown. In addition, the majority of research examining the mental health of gay-identified adults has been done with older adults, and virtually nothing is known about the mental health status of gay-identified adolescents. The specific aims of this project are to: 1) examine the prevalence of depression and suicide-related ideation in gay-identified young men and women in a metropolitan area; 2) determine the prevalence of anxiety and attachment disorders in these same gay-identified youth; 3) compare the prevalence of psychiatric and developmental problems of gay-identified youth to heterosexual youth; and 4) examine the relationships between mental health problems and relationship status. The sample will include 1,054 school children from elementary school through middle school (grades 3-8) in an ethnically diverse area of Baltimore City, and their parents will be interviewed about their parenting practices. A subsample of 654 of these children will be randomly selected for the Gay Youth Survey. Study results will provide more information about the mental health of gay-identified young people than is currently available, thereby helping to inform mental health services and programs designed for gay-identified youth. In addition, data will be collected on the mental health of heterosexual youth, and these data will be used to compare their psychological functioning to that of gay-identified youth. A mixed-mode (

Q: Find duplicates in a table and change the value of The table below has 2 duplicates for productid 1260 & 1261 with the same clientid 4128. I'm trying to write a query that finds the duplicate records and change the value of the duplicated record's lineid to the value of the previous record's lineid. The result should look like below. The lineid are not consecutive, they are random.

productid	clientid	lineid
1260	4128	3729
1261	4128	3730

I have written the following script that finds the duplicates and changes their lineid, but it doesn't work.

```
SELECT DISTINCT productid, clientid, lineid FROM web_sales_lineitem WHERE lineid IN (SELECT lineid FROM web_sales_lineitem WHERE productid IN (1260,1261)) ORDER BY lineid DESC
```

A: You need to use lag() to identify the previous row. Also, you don't need a subquery to find
