I am able to read QR Code using ZXing Library and it works absolutely fine. But the problem is, I am getting API Level 8 device and the minimum SDK version is 7, so I cannot open a QR Code image using Intent. So, is there any way to get QR Code contents and then open it with any other method? Any help will be appreciated. Thanks, A: Google says you need API level 14 to do this: Use the deprecated WifiManager.startScan() to get started. The present invention is generally in the field of microelectronics, and more specifically, methods of fabricating non-volatile memory devices. Non-volatile memory (NVM) is often implemented on an integrated circuit (IC), where the IC also includes volatile memory (e.g., static random access memory (SRAM) or dynamic random access memory (DRAM)). Volatile memory loses its contents when the power is removed, whereas non-volatile memory does not lose its contents when the power is removed. In this way, the non-volatile memory can maintain its contents even in the event of a power failure. Many non-volatile memory devices are configured to store digital information (e.g., a "1" or a "0"). Accordingly, the design of the NVM circuits and/or the operating speed thereof may be tailored for the digital information. For example, assuming a non-volatile memory device is configured to store a 32-bit value, eight memory cells may be arranged as a single row and connected to a word line, and eight memory cells may be arranged as a single column and connected to a bit line. In this way, when data is read from the non-volatile memory device (e.g., to read the 32-bit value), a voltage difference may be detected at both the bit line and b7e8fdf5c8
