The heading on this section may vary by country: In some places, the use of the term "photoshop" refers to Adobe's freeware image editing software. Understanding the difference between editing and authoring Authoring isn't the same as editing. A professional author doesn't just make a copy of a document as an image and then use Photoshop to alter it. Authoring is a process of creating an original. You can either create a new document or use an image as a template. You can create a new image file, edit an image, or combine the two. Authoring tools might be a hard copy, an image on the screen, or a combination of the two. You can add text to an image to make a hard copy or may use other tools (such as illustration software) for that purpose. See the nearby sidebar for more information. Here's a simple example: Your client has a portrait. You make a copy of it and then edit it in Photoshop. You make the necessary changes and save it as a new version. You then send it to the client. The client is happy with the changes, but wants to make a few more. You send a second copy, which is then edited. Instead of creating two new files, you can use the image editing feature in Photoshop to combine the two copies so they are one image. You'd create a layer in the original file that contains both images and then create another layer that contains the changes you made to the second image. You can place the original image on top of the new image and then remove the original layer. Creating a new layer You can create a new layer in various ways, including these: Press the New Layer icon, which is the Layer icon with a plus sign on top. Choose Layer⇒New Layer. Choose Layer⇒New from Template. Highlight the part of the image you want to appear on the new layer. When you create a new layer, you can choose whether or not to include existing layers. This makes sense because you don't want a layer to overwrite the original image. So, when you create a new layer, you might choose to create a new layer over the part of the image you want to include. You can add, delete, or rename layers. To add a new layer, choose Layer⇒Layer to New Layer. You can then create a new layer under the existing layer.
