Pen tools are popular for creating rounded corners. Creating single or multiple guides can help you more accurately place an image. The Type Tool lets you create various text effects (including ligatures). Use them to create specific fonts, such as Comic Sans MS, Helvetica Neue, or Arial Black. The Magic Wand enables you to quickly select items by measuring the image or using a pre-set color or highlight color. The Liquify and Filter Tools are also commonly used. The Liquify Tool works in a similar way to the Cloth Tool in Corel Painter. Photoshop's Filter Tools are specifically designed for filters, which change the appearance of images and don't damage them. The Levels Control Panel allows you to adjust the brightness or contrast of an image. The Move Tool moves items on the canvas. Some other features include the Fuzzy Select Tool, which works as a replacement for the Direct Selection tool, and the Eyedropper tool, which is a way of saving selected pixels. The Pen Tool lets you create a perfect line or arc. The Patch tool is used to correct the brightness or color of an image. The Options button changes the appearance of your computer screen to better reflect the design of Photoshop. YouTube allows millions of people to upload and share their videos. The number of videos uploaded on a daily basis is estimated at more than 400 hours, or 8.8 days, which would be around 33,000 minutes, or 300 million minutes. People who are interested in video production and sharing can create a channel to reach a huge audience of people interested in their content. They can upload and share their video with the world. YouTube has helped people make movies, promote and sell products, market their businesses, and create original content. INTRODUCTION YouTube is the world's most popular online video sharing and video-hosting service. It offers online video streaming with multiple features, including video editing and compressing, subtitling, picture and video enhancing, animations, live video streaming, captioning and automatic video sharing. Over 50 percent of the world's population is online and the users of YouTube represent diverse audiences from around the world, which increases the likelihood of the viewing public being able to find a video relevant to their interest. WHAT is YouTube? In 2006, three former employees of PayPal, the online payment processor, founded YouTube to give users a video-sharing site. YouTube was introduced to the public in

This invention relates generally to apparatus for forming twisted glass rovings from a plurality of spools, commonly referred to as donuts, and more particularly to automatic winding apparatus for continuously applying a plurality of heated twisted glass donuts to a forming wire. Prior art glass rovings forming apparatus are known which continuously apply a plurality of glass rovings to a continuously moving forming wire. The glass rovings and forming wire are conventionally twisted together to form a twisted roving. A major problem with the prior art apparatus is that they form a fine twisted roving having a surface which has a relatively large diameter and a surface which has a relatively small diameter. The small diameter surface has a cohesive strength which is often less than the cohesive strength of the larger diameter surface, resulting in the loss of one or more (or even all) of the rovings during winding. This is especially troublesome when used in combination with automatic reeling apparatus. In order to improve the quality of the small diameter surface of the twisted roving, it has been necessary to resort to a more complicated fabrication process which is usually time consuming and expensive. One prior art approach to solving the problem is to control the tension applied to the forming wire in an effort to ensure that the surface having the reduced cohesion strength is on the inside of the formed roving. One such an approach is disclosed in the U.S. Pat. to Haag (3,213,460), which concerns the use of two metering rolls driven at different speeds and thereby controlling the total speed of the producing roll. There has been no prior art which addresses the problem of forming a twisted roving having a surface of suitable cohesive strength for a given diameter and with a different surface of suitable cohesive strength for a different diameter. Accordingly, an object of the present invention is to provide an improved continuous glass roving forming apparatus which continuously forms a twisted roving having a surface having high cohesive strength with an opposite surface of low cohesive strength. Another object of the invention is to provide an improved glass roving forming apparatus which continuously forms a twisted roving having an improved cohesive surface. A further object of the invention is to provide an improved glass roving forming apparatus which continuously forms a twisted glass roving wherein the cohesive surface of the roving has a consistent diameter. Yet another object of the invention is to provide an improved glass roving forming apparatus which continuously forms a twisted roving having a surface having cohesive properties which is substantially free of compression set. Still another object
