In all the language of the world, one word sums up the art of digital image retouching: \_refinement\_. When we retouch an image, our goal is to bring out the best in it, making it more attractive to the viewer, and less susceptible to the vagaries of time. This art can make a model less recognizable to her next-door neighbor, or it can remove a wrinkle or two from a celebrity's face, making her look flawless. A retouching project is always different, involving different components and time frames for completion. We hope that you find some of our tips and ideas on retouching helpful. In any case, it's never too late to get a head start on a retouching project. ## Preparing Your Image You need to think about your model, figure out what she needs, and how she needs it. This process of choosing and reasoning about the type of retouching work to be done is the first thing to consider before you begin any retouching. Start by making a list of the things that need to be changed in your image. Ask yourself: What needs to be done to make this photo more desirable to you? Perhaps she needs a new facial expression, or clothes more appropriate for the setting, or even to better match the client's logo. Having a list of the desired changes prior to beginning any retouching will allow you to choose the right editing tools for the particular case. ## Choosing the right retouching tools Photoshop has many \_tools\_ for retouching images. We find that the toolbox is very extensive. You'll use the retouching tools most often in combination with one another for a particular type of image alteration. There are three categories of tools: \* \*\*Exposure and toning tools:\*\* These tools deal with making the entire image brighter or darker, and in some cases restoring color. They work best with images that are too dark or too light for a retouching project. (See Chapter 5 for more information on exposure and toning.) \* \*\*Raster and vector tools:\*\* These tools work on your image pixels and not just layer information, and can be used for creating more complicated effects, such as creating shapes from your image or creating a raster effect to simulate brush strokes, among many possibilities. (See Chapters 6 and for more about raster tools.) \* \*\*Specialized tools:\*\*

Q: How can I convert a date string to a YYYYMMDD date format in VBA? I have a date value in the following format: "15/12/2008" But I would like it in the format: "20081215" Is there an easy way to do this? A: Use a simple DateSerial: Sub DateSerial() Dim sDate As String sDate = "15/12/2008" Dim y As Integer y = DateSerial(sDate, vbMonday) Dim m As Integer m = DateSerial(sDate, vbTuesday) Dim d As Integer d = DateSerial(sDate, vbWednesday) Dim Result As String Result = CStr(y) & " " & CStr(m) & " " & CStr(d) MsgBox "My new date is: " & Result End Sub 1. Field of the Invention The present invention relates to a display apparatus and a display method. More specifically, the invention relates to a display apparatus that is responsive to a user input, and to a display method that is applied to the display apparatus. 2. Description of the Related Art Conventionally, as a display apparatus having a display panel that displays an image, there is known a display apparatus that enables the user to input an instruction to a display state of a displayed image by detecting an input position at which the user touches a display screen surface with a hand or the like. Japanese Patent Application Laid-Open No. 2013-219469 discusses a display apparatus that can display an operation screen by instructing an image to be displayed on a display panel to a predetermined position in accordance with the touch of a finger. However, when the user wants to input the same instruction to all displayed images, the display apparatus discussed in Japanese Patent Application Laid-Open No. 2013-219469 has a problem that as many operations are required as the number of images to be displayed. Further, in order for the user to obtain the same instruction to a plurality of images, it is necessary to set as many predetermined positions on the display screen as the number of images. When a plurality of items are displayed
