## What's New In?

Author's review Top Video Sound Extractor Description Top Video Sound Extractor can extract audio from video files and convert it to MP3, WAV, OGG and WMA format. With this video converter, you can extract audio from as many video files as you want and perform the sound extraction as many times as you wish without restarting the program. Just drag and drop the videos to the main window and then you'll get the separated audio tracks. There are several options to change the audio settings, such as bit rate, sample rate, sound channel, wave format,

---

etc. Here is a list of the options:

**Preview the video clip:** The program lets you preview the video clip before extracting the audio track.

**Cut the video clip:** With this option, you'll be able to mark the start and end time of the clip so it won't start extracting the audio track from the video.

**Set the output directory and temporary folder:** This option lets you select where your audio files will be saved to. Now, you can just select the file type and click the 'Extract' button to start the sound extraction process. The video conversion is lightning quick, and there are no errors or hangs.

There's plenty of other options for

---

file properties, but if you don't use them, Top Video Sound Extractor can perform the audio extraction for you. There is also the ability to select multiple video files and batch-convert them all to the MP3 format. So, the next time you start digging around for some free sounds in your favorite videos, you can use Top Video Sound Extractor to convert them to MP3. The number of output file formats is on the upper limit, but you can convert as many videos as you'd like. All you need to do is drag the video files to the main window, and then press the Extract button. Top Video Sound Extractor is a great application for extracting

---

sound from video. It's easy to use, fast, quiet and doesn't make any problems. Unfortunately, if you want to optimize the audio for audio CDs, the software can't do that for you. Also, the application has one serious disadvantage - it doesn't have any batch processing feature. This means that it will perform the same action for one video file each time you open it. Batch processing is something really useful, especially when you want to process a number of files at once
