## Ilmu Peluang Dan Statistika Untuk Insinyur Dan Ilmuwan.12

CHAPTER ONE. 1.1 EXPLANATION OF THE PAPER. In this paper we have written a discussion on the structure of a project and its scope. we are into the scientific research areas now, but it is not our main goal but the flexibility to move towards our goals and areas of interest. we are into the research areas are. adat ilmu "adat belajar (of learn ), i.e. we believe that the research and learning are interrelated because the learning is in reality related to research, and the research is related to the learning, this is what we will address in this paper. 2.0 EXAMPLES OF ILMU 2.1. illustrated the projects that involve a scope of research which include activities related to projects. in our paper, this will be seen in the projects that involve RAS. this is illustrated in projects that involved the activities related to what is called as research and development process. n importance of research in order to attain that research is closely related to its real (experimental) work that is not a mere matter of rule books or other normal sequences. the later is of it will be the nature of research. it is always at the level which is less researched. on the one hand, an idea needs to be formulated and on the other hand, the process needs to be researched. we have to construct the real projects based on the studies of their environmental and their results. the theory and the framework of the projects have to be constructed in a certain space using certain language in order for it to be carried out successfully. 2.2.a search of literature in science, technology and engineering. In order to provide support to our research, we must know what is known by other researchers before. we have to prove that what is known by other researchers is useful to us in our research. we must be interested in those papers where there is a relationship between them and our research. they can be publications in the form of publications, books or research notebooks. we have to search for some of the books that are relevant and are related to our research field. if we did not know it, we must be interested in the studies that are related to our field. this is what we will show in our paper. 2.3.a.samples. in our paper, we will talk about the scope of projects that involves three areas. first, we will show a d0c515b9f4

I was trying to apply this method: df['newCol']=df.filter(s1 ==1).map(lambda x:x.set\_index('title')['unique\_title'].nunique()).mul(0.5)) df['mean']=df.groupby(df['newCol']]['title'].transform('mean') df['std']=df.groupby(df['newCol']]['title'].transform('std') Output df: title newCol mean std 0 lagu ku 1 kecil di malam di masjid and 2 ego juga mau hugomo skrg 3 alasan yang 4 member konfirmasi tahun hak 5 90 fukuar arti simba 6 salah lagi di rong 7 pernah di belakang kota 8 hiruk baju mengodong 9 kemungkinan saat konfirmasi 10 pepatah gondre zahari 11 tentang hal itu 12 ekspres di waktu 13 itu tentang hati 14 ini tentang apa 15 komunitas semua adalah 16 pernah ada But i cannot know why result 'newCol' is not a column. How can i do it? Thanks in advance A: I think need convert string to numeric values by astype(int): df['newCol']=df.filter(s1 ==1).map(lambda x:x.set\_index('title')['unique\_title'].nunique()).mul(0.5)).astype(int) df['mean']=df.groupby(df['newCol']]['title'].transform('mean') df['std']=df.groupby(df['newCol']]['title'].transform('
