1. _**Photoshop**_ : By clicking this icon you begin editing. When you open a file it opens automatically. You can see some of the tools and controls at the bottom of the screen and in the layers panel at the top. You also have several presets for the common image tasks, such as clipping, trimming, selecting, and so on. The screen is split into four sections: the workspacetopage, The Image area, and the Layers panel. The top of the workspace section has a number of tools to help you place things, such as selection tools, brushes, and tools to help you edit the image. The top of the image area and the Layers panel is where your edit happens. When you create a new file, it comes with a library of stock images, fonts, and so on already installed. You can also import your own images and audio. Each image is on a layer so you can overlap one image over another to create a composition. You can use the tools in Photoshop to turn an image into line art or you can use filters to give it new dimension. 2. _**Image**_ **Area:** This is where you work. Click an image and get a view of it with the various tools on the left side of the work area for image manipulation. You can use tools like the Pencil or Brush tool to make selections, choose foreground and background colors, and apply a mask. The tools allow you to create selections, crop, paste in, trim, create and edit layers, and many other tasks. 3. _**Layers Panel:**_ On the top of this section of the screen, you will have the number of layers, the name of each layer, a thumbnail of the image, and the visibility of each layer. Click the color icon (select a foreground or background color for the layer) to change the visibility of the layer, which you may or may not want. Below that you have two icons for the two kinds of layer that Photoshop uses, and you can add them to any layer. In the Layers panel there are four types of layers that help you manipulate your image. These are: • **Clipping Path:** A path is essentially a channel that can hold the location of a point, line, polyline, or polygon to cut out the image. You can create a clipping path for a photograph using a photo editing program or you can open an image file in Photoshop and

Neurofibromatosis type 1: Current management recommendations and future prospects. Neurofibromatosis type 1 is an autosomal dominant disease caused by mutations in the neurofibromin 1 (NF1) gene located on chromosome 17p11.2. Currently, there are many treatment modalities available to treat NF1 patients with different disease phenotypes and life expectancies. Management recommendations are based on disease state, age, complications, and comorbidities. The authors review current management strategies, outcome data, and future prospects for NF1.Q: C# : Windows Firewall allow UAC to open a file I am currently setting up my C# program to open a file and print the contents into the console. What I want to do is to make it run in the system context. I have tried to set the permission to Everyone group, but in Windows 7, it will always prompt an administrative permission to allow the program to open the file if there's a security dialog. I tried to allow UAC to run a program in the system context in the windows firewall but it seems that this will only allow a process to be run in the system context when a security dialog comes up and get closed. (Windows 7, C# and.NET 4) So how can I get around this? Will running as administrator work? A: You can run your application elevated (as an administrator) through the Security tab of the application manifest. Add a line like this to your application's manifest:

Q: Get output of all commands from history in bash I'm trying to get all commands in my history, in a single bash script. Of course, in bash, I know I can, by default, get the current history by using: $ history | tr -s '/' ' ' Or, getting all the commands from a single user by using: $ echo $USER"_/~" | tr -s '/' ' ' Is there a way I can get all the history from the current bash session, in one go? In other words, I want the full output of all the commands that I've executed, one after the other, while the bash is opened. I've looked at history-substring-search, but it doesn't seems to be exactly what I want. A: You can use ~/.bash_history file for this. You can get it by using cat ~/.bash_history It stores history for bash. A: I've been using this method lately: history | awk 'BEGIN {FS="|"} /^[\t]/' | tr -d " " Q: TikZ shape inside tikzpicture, problems with coloring I am currently trying to wrap the following TikZ-Shape in a tikzpicture and I have some issues with the color. I mean, the Shape looks fine to me, but it's background is not colored and there are some areas of the Line that are not colored. \documentclass[border=10,tikz,final]{standalone} \usepackage{tikz} \usetikzlibrary{shapes} \begin{document} \begin{tikzpicture} ode [draw, minimum width=2cm, minimum height=2cm] { \tikz\path [draw, red!30, fill=black!15] (-0.6,-1.9) rectangle (0.6, 1.9); ode [inner sep=0pt,anchor=east] { ode{a} (\tikzwidth)}; }; \end{tikzpicture} \end{document} The output looks like this: A:
